Beirut, Lebanon (UTC+3) Open to remote: EU overlap & US-East mornings

PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 13 years building and running business critical web products end-to-end. Built the UI and backend logic for an ERP platform that 2,000+ businesses run daily operations on, plus the cross-platform POS that syncs to it. Early web lead for the platform, working alongside the product/database lead and later collaborating with other lead engineers as the team grew from 2 to 7. Work spans frontend, backend architecture, relational data modeling, and REST API design.

PROFESSIONAL EXPERIENCE

Senior Software Engineer - Wizard Solutions (full time)

Jal El Dib, Lebanon | Feb 2018 – Present

- Led migration of legacy desktop ERP to a web platform (PHP, MySQL, JavaScript, React), shipping a solution now serving **2,000+ business clients** on a recurring revenue model.
- Led the web engineering effort from a solo role to overseeing a 7-engineer team, mentoring junior developers and coordinating with product and database leads to defining common architecture, resulting in faster development.
- Building new ERP pages and migrating legacy pages to React with clean architecture, TypeScript, TanStack Query and React Testing Library, using Cursor IDE for AI-assisted leading to organized code, responsive UI, and reduced load on database.
- Rebuilt legacy POS as a cross-platform Flutter + SQLite application with local first data, delivering offline capable sales that sync to ERP via a REST API I designed and maintained.
- Fixed silent truncation of large invoices (10,000+ fields per document) by moving to a single JSON payload, delivering reliable saves for enterprise documents without raising server limits.
- Identified missing transactions on multi step document saves (invoice → inventory → accounting), delivering a team wide standard for atomic database transactions and explicit failure handling.
- Diagnosed 2+ minute invoice save to nested database logic, delivering save time of 3 seconds or less for large invoices.
- Extended core logging to include tenant, logged in user, originating SQL and full stack trace in AWS CloudWatch, delivering faster root cause analysis across a large codebase.

Software Developer - Al-Kaff For Computer (full time)

Riyadh, Saudi Arabia | Mar 2013 – Dec 2017

- Rewrote the legacy payroll submission web app from scratch on a current PHP version and maintained other internal applications.
- Moved hosting off a Canada-based private provider onto a **Linode** Linux server I set up (Apache, MySQL) and led the database migration — cutting hosting from **~\$4,000/month to \$7.50/month** including backups.
- As the sole developer, built internal web applications automating **monthly payroll processing for 400 companies** (2,000+ employees each) and **secure member ATM card issuance** and lifecycle operations.
- Resolved critical performance bottlenecks: migrated **MyISAM** → **InnoDB**, redesigned core table structures, eliminated N+1 queries, and refactored business logic cutting payroll processing from **10 minutes with timeouts to 5 seconds or less**.

TECHNICAL SKILLS

- **Frontend:** React, Next.js, **TypeScript**, JavaScript, **TanStack Query**, **React Testing Library**, Flutter (Dart)
- **Backend:** Express.js, Node.js, **REST API design**, PHP
- **Databases:** PostgreSQL, **MySQL**, **SQLite**, Prisma ORM
- **Architecture:** Modular monolith, **Relational Data Modeling**, clean architecture
- **Platform & Tools:** **GitLab CI**, Docker, **Vercel**, Render, Linode, **Cursor IDE / AI-assisted development**

EDUCATION

Bachelor of Sciences, Computer Science, Lebanese International University, 2012
