PROFESSIONAL SUMMARY

Full Stack Engineer with **13 years** building and scaling business-critical B2B SaaS. Core maintainer of a **VAT-compliant, multi-tenant ERP/POS platform** serving as the daily financial backbone for **2,000+ businesses across Lebanon, KSA, UAE, and Africa**, used for government VAT reporting and fiscal invoicing. Led web engineering from solo contributor to **7-engineer team**, mentored juniors, and co-defined architecture with product & data leads. Specialized in modern React frontends, TypeScript, Node.js REST APIs, PostgreSQL/MySQL data modeling, and offline-first Flutter + SQLite mobile. Focus: frontend architecture, performance, relational modeling, and reliable transactional systems.

PROFESSIONAL EXPERIENCE

Software Engineer - Wizard Solutions (B2B SaaS ERP/POS)

Jal El Dib, Lebanon | Feb 2018 – Present

- Led migration of legacy desktop ERP to web (PHP/MySQL) later (**React, TypeScript, Next.js, TanStack Query**), now serving 2,000+ B2B clients on SaaS model with dedicated databases.
- Built and maintained **VAT Compliant ERP & POS** engine handling VAT calculation, fiscal invoicing, returns/credit notes, and audit-ready accounting entries used by businesses for government tax submission.
- Designed multi-country tax configuration to support varying VAT regimes across Lebanon, KSA, Dubai (UAE), and Africa, including tax-inclusive/exclusive pricing, rounding rules, and compliance reporting
- Architected transactional accounting flow **invoice => inventory => accounting** with atomic DB transactions and full audit trail, ensuring fiscal data integrity for VAT audits and government reporting.
- Lead and mentor for web team growth from 2 => 7 engineers; conduct code reviews, onboarding, and cross-team architecture sessions.
- Built ERP frontends with **React + TanStack Query + React Testing Library**; using **Cursor IDE / AI-assisted development** to accelerate delivery.
- Rebuilt POS as **offline-first, local-first Flutter + SQLite** modern desktop app, syncing offline sales to ERP via REST API I designed and maintain.
- Fixed **silent truncation** of large invoices (**1,000+ products**) by switching from form data to single JSON payload.
- Optimized large invoice save from 2+ minutes to **3 seconds** and implemented tenant-aware observability to **CloudWatch** (context, queries, traces) for rapid root-cause analysis.

Software Developer - Al-Kaff Trading Company (Al-Kaff Systems)

Riyadh, Saudi Arabia | Mar 2013 – Dec 2017

- Owned full-stack development of legacy payroll SaaS serving 400 companies (2,000+ employees each).
- Automated monthly payroll process and added auto backup; reduced manual ops and data-loss risk.
- Cut payroll runtime from **10+ min timeout** into less than **5 seconds** by migrating MyISAM into InnoDB, fixing N+1 queries, and implementing DB transactions.
- Migrated VPS to self-managed Linode (Ubuntu + Apache + MySQL), cutting hosting cost from **\$4,000/Year to \$90/Year (97.75% reduction)** while improving reliability.

TECHNICAL SKILLS

- **Frontend:** React, Next.js, TypeScript, JavaScript (ES6+), TanStack Query (React Query), React Testing Library, Tailwind CSS
- **Backend:** Node.js, Express.js, PHP, REST API Design
- **Databases:** MySQL, PostgreSQL, Database Design, Query Optimization, Transactions, Indexing
- **DevOps & Tools:** AWS CloudWatch, GitLab CI/CD Git, GitHub, Linode, Linux (Ubuntu), Apache, Cursor IDE / AI-assisted dev
- **Practices:** SaaS Architecture, Modular Monolith, ERP/POS Domain, Performance Optimization, Team Leadership & Mentoring, Clean Architecture

EDUCATION

Bachelor of Sciences, Computer Science, Lebanese International University, 2012
